Sources

This report includes population and labor force information for the State of Montana. There are several sources for this information. The current Population Survey (CPS) annual averages estimates for the years 1976 through 1979. The CPS is taken annually by the U. S. Department of Commerce and prepared for the Employment Security Division by the Bureau of Labor Statistics. Annual Labor Force Reports are prepared monthly by the Research and Analysis section of the Employment Security Division. These reports contain estimates of the civilian labor force, employed persons, and unemployed persons based on a household sample, and an estimate of the non-farm wage and salary jobs based on an establishment survey. The Employment Service Automated Reporting System (ESARS) is compiled from forms completed daily in local Job Service offices. The census is a count of the population that is taken every ten years by the Bureau of Census for the U. S. Department of Commerce. The 1970 Census is used since the 1980 Census is not finalized, but the advance reports of the 1980 Census is presented.

Significance

The tables which follow are designed to provide labor market information to assist employers in evaluating the utilization of women and minorities in their work force and in establishing goals to improve such utilization. The data in this publication meets or exceeds the minimum requirements of the Office of Federal Contract Compliance Revised Order No. 4, Subpart B, Paragraph 60-2.11: Section (b), (1), (i)-(v) and (2), (i)-(v).

The Caveat Section includes tables of sampling errors of estimated numbers. The tables should be used in conjunction with the Current Population Survey tables which are estimates derived from a sample.

Coverage

Tables I through VIII contain 1979 annual average employment and unemployment estimates of Montana's population and labor force. Included are figures for various occupational and industrial group, full or part-time employment status, reasons for and duration of unemployment. The tables are also divided into catagories by sex, race and age.

Annual estimates from 1976, 1977, and 1978 population surveys are presented in less detail on Table IX. Trends of population growth, labor force participation, occupational distribution and unemployment rates from 1976 to 1979 are compared for sex and race catagories through the use of graphs with a commentary on each graph.

The Historical Series of the Labor Force Reports on Tables X, XI and XII contain estimates of the civilian labor force, employed persons, unemployed persons and Non-Farm Wage and Salary Jobs. Monthly data as well as annual averages are included. There are statewide tables as well as tables for the two Standard Metropolitan Statistical Areas (SMSA) for the last two years. Yellowstone County is reported as the Billings SMSA and Cascade County is the Great Falls SMSA.

Job Service and Affirmative Action is a short commentary by the Equal Employment Officer of the Employment Security Division of the role that the Job Service can play in equal employment opportunity and affirmative action. Table XIII shows the sex, race and age of applicants that registered with Job Service offices throughout the 1980 Fiscal Year and the amount of service that these applicants were provided. The race and sex by occupation of applicants that were actively registered for work through Job Service offices at the end of the 1980 Fiscal Year are on Table XIV.

The 1970 Census provides demographic information for Tables XV - XVIII. Montana's total population by county, sex and race in Table XV. Racial catagories are enumerated for White, American Indian, Spanish American, Negro, Japanese, Chinese, Filipino and an "other" catagory which includes Korean, Aleut, Eskimo, Malayian, Polynesian, etc. The enumeration of persons of spanish heritage was based on data from the 15% sample on mother tongue and therefore nearly all racial groups are included. Hispanic people, however, are classified as white unless self-identification of the respondent denoted some other race. The relative composition of the civilian labor force, employment and unemployment by county, sex and race is contained on Tables XVI, XVII, and XVIII.

The advance reports of the 1980 Census provides updated information of population characteristics and housing counts. The number of persons by race and housing counts for Montana, it's counties and county subdivisions are on Table XX. The county subdivisions on Table XX are geographic areas that have been defined by the Census Bureau. They are designed to represent areas focused on trading centers and have easily described boundaries. Number of people by race and the housing units in incorporated places are on Table XXI and Table XXII has the data for Montana's two congressional districts.

SOURCE: Geographic Profile of Employment and Unemployment, 1976, Table 1, Bureau of Labor Statistics, 1977, Report 501, Current Population Survey.

Numbers are rounded to nearest thousands and may not add to totals due to rounding.

CIVILIAN NON-INSTITUTIONAL POPULATIONS

From 1976 to 1978, the non-white population doubled some from 12,000 to 24,000. In 1979, their population dropped to 23,000. In 1977, the non-white population showed a larger growth in numbers than the white population. In the four years, the total white population has increased by 27,000 while the non-white population gained 11,000.

The rate of growth of the white population has been slightly positive throughout the four year period, and was larger in 1978 than the year before or the year after. The rate of growth of the non-white population was very high in 1978 and 1979. In 1977, the non-white population had a negative growth rate.

PARTICIPATION RATES

The rate at which the male population participates in the labor force is greater than the female rate. The female participation rate has increased steadily over the four years. The percent of the male population in the labor force decreased in 1979.

The rate at which the white population participates in the labor force is higher than that of the non-white population. The non-white participation rate increased from 1978 to 1979. The participation rate for whites decreased in the same period.

The unemployment rate is typically greater for non-whites than it is for whites, and (more) for females than for males. The notable exception was in 1977 when the unemployment rate for non-white males was lower than the other population groups. It should be noted that in that year the participation rate was also very low for the non-white population. In 1978 the unemployment rate for non-white females was lower than the rate for non-white males.

Percent Distribution of Employed Persons
by Occupation Group, Race
and Sex for years 1976 to 1979

The four major occupation groups are presented here by graph and commentary. The subsequent pages will show the subdivisions of these groups. The code for the population will remain the same for all the graphs and is:

Total ———————
White Male — — — —
Non-White Male — — — —
White Female . . . . . .
Non-White Female — . — . — .

The scale for the graphs will remain the same for all graphs on the same page except for the subdivisions of the service industry. But the scale for the graphs will change from page to page for maximum visualization.

The total labor force in white collar work has increased slightly. More females than males select this type of work. There is an increase in the portion of white being both these occupations, while the non-white percentage declines.

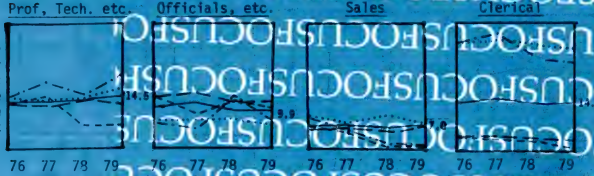
There are more males than females in blue collar work. The percent of the total population in blue collar work has decreased in the years from 1978 to 1979. The white male portion declined while the percent of non-white males remained the same and both female populations rose slightly over the same period.

Service work shows a predominance of females. The percent of white females in the service area has decreased in the last few years. The portion of the other three populations has increased. Both non-white populations have shown the largest increase.

A majority of farm workers are males. There has been a slight decline in the percent of the total labor force in farm occupations in the last four years. The portion of the white males and non-white female workers has decreased. The white female percentage has increased slightly. The non-white male portion has risen the most.

WHITE COLLAR OCCUPATIONS

These graphs and the commentary present the four subdivisions of the white collar labor force.



The percentage of professional and technical workers has increased over the last four years and is now the largest subdivision of white collar workers. The female population has the greatest portion of this group, and the largest percentage of any population is the non-white female. The non-white male labor force in this group dropped dramatically from 1977 to 1978 but increased from 1978 to 1979. The biggest increase in the total labor force in this work was over the last year. The percentage of white males dropped during this time, while the portion of the other three populations were on the rise.

The managers and officials group is dominated by the male populations. The total percentage of people employed in the group has declined during this period. The white male portion has followed the trend of the group as a whole and retains the largest percentage of any labor force. The white females have remained at the same level. The two non-white populations have had large fluctuations but have been decreasing over the last year.

Sales occupations have increased slightly over the four years, and are predominantly occupied by the white labor force. The non-white labor force has decreased to nearly zero in this occupation. The percent of white females in this work has decreased over the last year. In the same period, the percent of the white male labor force in sales has increased.

There has been a slight increase in the clerical labor force over the four years. Females make up the major portion of the labor force. There has been a decline in the percent of each population that goes into clerical work. The female work force has decreased more than the male, and the non-white has more of a drop than the white.

BLUE COLLAR OCCUPATIONS

These graphs and the commentary present the four subdivisions of the blue collar labor force.

Craftsmen occupations make up the largest group of blue collar workers and this group has declined slightly in percentage of labor force in the last year. These occupations have more males than females in them. The percent of the non-white male population is the largest in this type of work. Females make up a very small portion of the labor group. In 1977, the non-white females had a significant percentage of this group but since then have dropped near zero. White females now have a larger percentage of their population in this division than non-white females.

The Operatives labor force has had a small increase in total percentage. The white males, the largest portion of this occupation, have followed the same trend as the division. The white female percentage had a slight increase. The non-white male portion has declined to a point where it is the smallest labor force in the group. There has been an increase in the percentage of non-white females over the last year and they have the second largest portion of population in these jobs.

The transport division is dominated by the males. Both female populations in this group have decreased. The non-white females in these jobs have gone to zero. There was a larger percentage of the non-white male population than the other three in this group in 1977 and 1978. But their portion dropped in 1979 and now the white male population is the largest portion of this type of work.

The laborers group is mostly a male labor force. The percentage of non-white males has fluctuated by large amounts but, in 1979, it had the largest portion of population in this group. The white female population in this group has increased gradually over the last two years. The non-white female population has decreased in 1979 and is now the smallest population group in this type of work.

SERVICE OCCUPATIONS

These graphs and commentary pertain to the service labor force. Due to the small numbers in the private household and protective service subdivisions, the style of each graph is different to maximize the visual presentation.

The private household labor force is mainly made up of females. There is a large percentage of non-white females than white females in the labor force. The non-white female portion shows a large increase in 1977, then a big drop in 1978 and remains at the 1978 level in 1979. The white female percentage changes by a small amount from year to year, and while increasing somewhat from 1978 to 1979, has decreased over the four year period. The portion of males, both white and non-white has dropped to zero.

The number of people working in the protective services has increased over the four years. Males dominate the labor force and the percentage of both male factors in the labor force has increased at a faster rate than the overall labor force. The portion of the non-white labor force in this division is the largest as of 1979. The percentage of females in this work is small and has decreased in the last four years. There is a larger portion of the non-white female population than white female population in protective services.

The rest of the service industry is not subdivided. The all other category contains most of the service labor force and the graph follows the same general trends as the entire group.

FARM OCCUPATIONS

The farm industry has two divisions which are presented here by graph and commentary.

Farmers are a predominantly male group. The overall percent of people in this labor force has remained nearly constant. The portion of the white male population is slightly less in 1979 than it was in 1976, although it has increased over the last three years. The percent of the non-white male population has increased the most and is now the largest in this division. The white female portion has increased steadily while the non-white female percent has decreased to zero.

Farm laborers are made up of slightly more males than females. The percent of the non-white male population in this work has largely fluctuations, but is the largest of the others in 1979. The white male population is somewhat less than it was in 1976, but has increased over the last year. The percent of the white female doing this work has remained fairly stable, while the non-white females have decreased to zero.

CAVEAT SECTION

The information in this publication is based on a sample rather than a complete count. Consequently, the estimate may differ from the figures that would have been obtained if it were possible to take a complete census using the same schedules and procedures. In general, the error of a sample estimate varies inversely with the size of the sample and the size of the estimate. Hence, an estimate for a subgroup constituting a small proportion of a population will tend to have a relatively higher error than an estimate for a subgroup constituting a large proportion of a population. For subgroups in the population, the small numbers sampled could introduce further problems with reliability. The minimum base necessary for BLS standards in Montana is 12,000. In some cases, this fact causes the figure given for percent distribution of employed and the rate of unemployed to have no meaning. When these percentages were greater than 100 or less than zero, dashed lines were inserted on the tables.

Sampling error tables make it possible to compute the relative error (standard error divided by estimated size) of a sample estimate, and to compare two sample estimates using a standard statistical test of significance. The sampling errors in this section can be used directly to develop 90 percent confidence intervals for sample estimates. To calculate a 68 percent confidence interval, multiply the sampling errors in this section by 0.6. To convert to 95 percent confidence, multiply the sampling error in this section by 1.9.

To derive a more precise sampling error for a given estimate, it may

be necessary to use interpolation. The interpolated standard error

For an estimate of 22,000 total white unemployed in Montana is:

$$Z = \left[\left[(S - B)/(A - B)\right] \times (X-Y)\right] + Y$$

Where: A = Published size immediately above the size desired (25,000)

B = Published size immediately below the size desired (10,000

S = Size desired (22,000)

X = Error of A (3,000)

Y = Error of B (2,000)

Therefore: Z = Error of S (2,800)

THE JOB SERVICE AND AFFIRMATIVE ACTION

The Job Service is not an EEO enforcement agency. We are a service agency to help you know and comply with EEO laws. It is important to realize that the use of the Job Service to help develop an affirmative action plan and even exclusive recruitment and/or referral through our local offices does not absolve an employer from or satisfy the requirements of EEO laws. We will refer qualified applicants from all available groups. But empty-ment of only members of one group may be evidence of discrimination and lead eventually to liability of your company for violation of EEO law.

AFFIRMATIVE ACTION JOB ORDER FOR AFFIRMATIVE ACTION PLAN

If an Affirmative Action Plan is written by your company and you discover certain minorities, females, handicapped, etc. are underutilized call Job Service. A special effort will be made through the use of an affirmative action Job Order to refer or recruit and refer qualified members of a group requested, not exclusively, but among the qualified veterans and other applicants referred.

The Job Service can help you with affirmative action and many other employment related needs. We have a statewide network of offices ready to serve you. These offices offer their trained staff to assist you in nondiscriminatory recruitment and prescreening of qualified applicants. We are happy to assist all employers with your employment related needs.

FOOTNOTES

(Tables XV, XVI, XVII, XVIII)

1/ These data were produced from the second and fourth counts of the 1970 Census of Population.

2/ The 1970 Census of Population enumerated Spanish-Americans as mostly white but also some Negro and other races.

3/ Includes all other racial groups not elsewhere classified, such as Hawaiian, Korean, Aleut, Eskimo, Malayan, Polynesian, etc.

4/ Includes those persons living within the Montana boundaries of Yellowstone National Park.

EMPLOYED PERSONS 16 YEARS AND OVER BY OCCUPATION, TOTAL AND FEMALE, BY RACE AND ETHNIC GROUP

FOCUS

ADVANCE REPORTS

1980 Census of Population and Housing

PHC80-V-28

MONTANA

Final Population and Housing Unit Counts

The figures in this report are final counts and supersede the preliminary counts published in the reports entitled Preliminary Population and Housing Unit Counts, PHC80-1. *The present series consists of 56 reports—number 1 for the United States, numbers 2 through 52 for the States and the District of Columbia in alphabetical order, and numbers 53 through 56 for Puerto Rico, Guam, Virgin Islands, and American Samoa. Counts for the Northern Mariana Islands and the remainder of the Trust Territory of the Pacific Islands are not part of this series of reports but will be published in a separate press release issued for each area.*

The final population count of the State as of April 1, 1980, was 786,690. This figure represents an increase of 92,281, or 13.3 percent, from the 694,409 inhabitants enumerated in the 1970 census.

The final count of housing units in the State as of April 1, 1980, was 328,465. This figure, which includes both occupied and vacant housing units, represents an increase of 81,862, or 33.2 percent, from the 246,603 units enumerated in the 1970 census.

This report presents final 1980 census population counts, classified by race and Spanish origin, and final 1980 housing unit counts for the State, counties, county subdivisions, incorporated places, and congressional districts. Total population and housing unit counts are also shown for 1970 for the same geographic areas.

Most of the statistics presented here are being issued in advance of their separate publication in the final reports, *Characteristics of the Population, Number of Inhabitants*, PC80-1-A; *Characteristics of the Population, General Population Characteristics*, PC80-1-B; and *Characteristics of Housing Units, General Housing Characteristics*, HC80-1-A. Data shown in this report for congressional districts of the 96th Congress will not be included in any other 1980 census reports.

An outline of the publication and computer tape program for the 1980 Census of Population and Housing can be obtained free of charge from the Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

Symbols used in tables: A dash "-" represents zero or a percent which rounds to less than 0.1. The symbol "(NA)" means not available, and three dots "..." mean not applicable. For area established after 1970, three dots "..." is shown in place of the 1970 population and housing unit figures and the 1970-80 percent change. A minus sign preceding a figure denotes decrease. The prefix "(r)" indicates that the count has been revised since publication of 1970 census reports.

A dagger "†" next to a geographic area indicates that the characteristics for 20 percent or more of the persons included in the 1980 census count for that area were substituted. Substitutions occurred during the computer processing of the census data when there was no evidence of the characteristics of persons but data for these persons. In these instances, characteristics of other enumerated persons were substituted. A more detailed discussion of substitution will be found in *Characteristics of the Population, General Population Characteristics*, PC80-1-B reports.

Issued February 1981

Race. Counts of the population by race as well as Spanish origin in this report are provisional. Final counts for race as well as Spanish origin will be determined after the sample data have been processed.

The sample counts will first appear in *Characteristics of the Population, Volume I, Social and Economic Characteristics*, PC80-1-C reports.

Information on race was obtained through self-identification; therefore, the data represent self-classification by people according to the race with which they identify themselves. Population counts in this report are shown for five racial groups: White; Black; American Indian, Eskimo, and Aleut; Asian and Pacific Islander; and other.

The category "White" includes persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a response such as European, European origin such as German, Italian, or Polish. (In the 1980 census, persons who did not classify themselves in one of the specific race categories but reported entries such as Cuban, Puerto Rican, Mexican, or Dominican were included in the "other" race category. In the 1970 census, most of these persons were included in the "White" category.)

The category "Black" includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but reported entries such as Jamaican, Black Puerto Rican, West Indian, Haitian, or Nigerian.

The category "American Indian, Eskimo, and Aleut" includes persons who classified themselves as such in one of the specific race categories. In addition, persons who did not classify themselves in one of the specific race categories but reported the name of an Indian tribe, such as Apache or Navajo, were included in this category.

The category "Asian and Pacific Islander" includes persons who indicated their race as Japanese, Chinese, Filipino, Korean, Asian Indian, Vietnamese, Hawaiian, Guamanian, or Samoan. Persons who did not classify themselves in one of the specific race categories but reported entries indicating one of the nine categories listed here were classified accordingly. For example, reported entries of Nipponese and Japanese American were classified as Japanese; entries of Taiwanese and Formosan as Chinese; etc.

The category "other" includes Asian and Pacific Islander groups not identified separately (e.g., Cambodian, Indochinese, Pakistani, Indonesian, Fiji Islander), and other races not included in the specific categories listed on the questionnaire. (Asian and Pacific Islander groups in the "other" category in 100-percent tabulations are included in the category "Asian and Pacific Islander" in sample tabulations.)

Spanish origin. As noted above, counts of the population by Spanish origin in this report are provisional. Final counts for Spanish origin will be determined after the sample data have been processed. The sample counts will first appear in the PC80-1-C reports.

Persons of Spanish origin or descent are those who classified themselves in one of the specific Spanish origin categories listed on the questionnaire—Mexican, Puerto Rican, or Cuban—as well as those who indicated that they were of other Spanish/Hispanic origin. Persons reporting "other Spanish/Hispanic" origin are those whose origins are from Spain or the Spanish-speaking countries of Central or South America, or they are Spanish origin persons identifying themselves generally as Spanish, Spanish American, Hispano, Latino, etc. Origin or descent can be viewed as the ancestry, nationality group, lineage, or country in which the person or person's parents or ancestors were born before their arrival in the United States. Persons of Spanish origin may be of any race.

Housing units. A housing unit is a house, an apartment, a group of rooms, or a single room, occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements. Both occupied and vacant housing units are included in the housing inventory, except that tents, caves, boats, vans, and the like are included only if they are occupied. Vacant mobile homes are included, provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' sales lots, at the factory, or in storage yards are excluded from the housing inventory.

The 1980 figures in this publication are subject to change pending the outcome of the various lawsuits dealing with the census counts.

TABLE XXII

Table 3. **Persons by Race and Spanish Origin and Housing Unit Counts for Congressional Districts: 1980**

(For explanation of symbols, see text)

The State Congressional Districts	Race																			
	White		Percent change, 1970 to 1980	Black		American Indian, Eskimo, and Aleut		Asian and Pacific Islander		Other		Spanish origin		Percent change, 1970 to 1980		1980		1970		Percent change, 1970 to 1980
	1980	1970		1980	1970	1980	1970	1980	1970	1980	1970	1980	1970							
The State	786 690	694 409	13.3	2	1	740 148	1 786	37 270	2 503	4 983	9 974	3 979	329 445	246 603	33.6					
First	347	346	0.3	1	1	283	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Second	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

[1] Population counts for congressional districts are based on 1970 census complete-count data; housing unit counts are based on 1970 census sample data. Minor discrepancies between the sum of the parts and the total are due to boundary corrections which were not assigned by congressional district and also because of sampling variability for housing unit counts.
